1. INTRODUCTION

The A-MP Inter-Contact Keying Plug 583462-1 can be used in any of the A-MP Modified Fork Connectors. The Plug is inserted between Contacts as shown in Figure 1.

2. INSERTION/EXTRACTION PROCEDURE

We recommend modified Needle-Nosed Pliers to insert and extract the Keying Plug. See Figure 2.

Insertion

1. Grip either end of the Keying Plug with the pliers and insert the plug into the front of the connector until it bottoms in the connector.

Extraction

1. Remove the Keying Plug using the same pliers. Simply pull the plug straight out the front of the connector.

3. PREPARING PRINTED CIRCUIT BOARD

Determine the section of the Printed Circuit Board to be removed, then using the dimensions shown in Figure 3, cut a Slot in the Board to accommodate the Keying Plug.
