

# **DP86** Constant Voltage with Fitting

## **SPECIFICATIONS**

- 316L SS
- Wet/Wet Differential
- Low Pressure
- ◆ 0 100mV Output

The DP86 constant voltage with fitting differential pressure sensor is a double-sided, media compatible, piezoresistive silicon pressure sensor packaged in a 316L stainless steel housing. The DP86 constant voltage with fitting can be designed with up to 8 different threaded process fittings. The sensing package utilizes silicone oil to transfer pressure from the two 316L stainless steel diaphragms to a single sensing element.

The DP86 constant voltage with fitting is designed for high performance, low pressure applications where differential pressure measurement is required. The stainless steel package makes it suitable for use in liquids and corrosive environments.

Please refer to the DP86, uncompensated, non-silicone oil, constant current and constant voltage (fittings and cable design) for more information on different features of the DP86.

## FEATURES

Threaded Process Fittings Up to -40°C to +125°C Operating Range Up to ±0.1% Pressure Non Linearity Solid State Reliability Low Pressure

## **APPLICATIONS**

Level Controls Tank Level Measurement OEM Equipment Corrosive Fluids and Gas Measurement Systems Flow Measurements

## STANDARD RANGES

Range	psid	Range	bard
0 to 1	+	0 to .07	•
0 to 5	+	0 to .35	•
0 to 15	+	0 to 001	•
0 to 30	+	0 to 002	•
0 to 50	+	0 to 3.5	+
0 to 100	+	0 to 007	•
0 to 300	+	0 to 020	•
0 to 500	*	0 to 035	*

## PERFORMANCE SPECIFICATIONS

### Supply Voltage: 10Vdc

Ambient Temperature: 25°C (unless otherwise specified)

-	Liquids and gases compatible with 316/316L Stainless Steel							

### Notes

Measured at ambient. 1.

2. Best fit straight line

Over the compensated temperature range with respect to 25°C. 3.

4. Guarantees output/input ratiometricity.

Load resistance to reduce measurement errors due to output loading. 5.

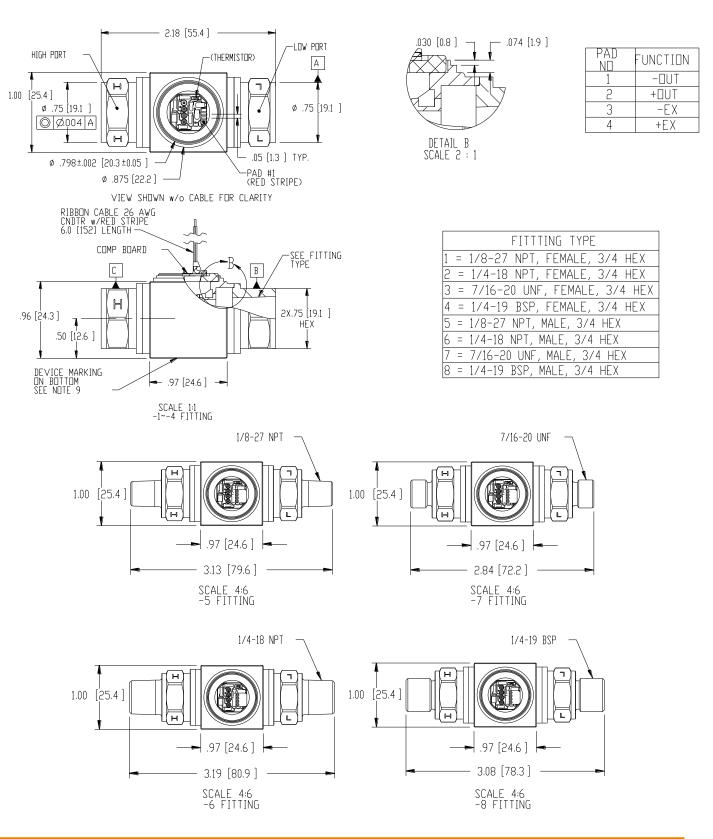

Between case and sensing element. 6.

For "H" (high-end) port, rated or 1000psi whichever is less. For "L" (low-end) port rated or 150psi whichever is less. The maximum 7. pressure that can be applied to a transducer without rupture of either the sensing element or transducer. -40°C to +125°C for 5psi. Maximum temperature for product with standard cable and connector is -20°C to +105°C.

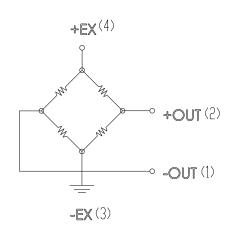

8.

## DIMENSIONS

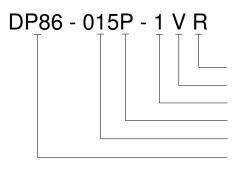

### Dimensions are in inches [mm]

## CONNECTIONS
