- ◆ Absolute, sealed and gauge ranges
- ◆ Amplified output available
- ◆ Linearity up to $\pm 0.25\%$ F.S

The **XPM10** is a miniature transducer designed to measure static and dynamic pressure under a wide variety of conditions, including hostile environments. It is made of stainless steel or titanium and is available in standard ranges from 0-1 to 350 bars [15 up to 5000 psi].

The **XPM10** incorporates Measurement Specialties' cutting edge SanShift™ technology, which virtually eliminates zero shifts caused by installation torque.

A **PT1000** temperature probe is optionally available as a custom design.

The **XPM10** may integrate different electronics for amplified outputs: **A1** 0.5-4.5V, **A2** $\pm 5V$, **A3** 4-20mA.

On request, Instruction documents can be provided to ease the selection and use of our sensors and provide helpful tips.
