General	
Function	The DSF xx15.xx xHV Ex-atex series speed sensors are suitable for use with a pole wheel to generate speed proportional frequency signals. They exhibit a static behaviour, whereby pulse generation down to 0 Hz is guaranteed. The sensing element is a magnetically biased Hall device, followed by a 2 wire amplifier. The sensors differ in housing sizes and connection.
Safety Notice	The speed sensors DSF xx15.xx xHV Ex-atex are certified for applications in areas with explosive atmospheres. These types are to be duly used in undamaged and clean condition. Modifications of sensors are prohibited if not expressly listed in these operating instructions.
Conformity to Standards	DSF xx15.xx xHV Ex-atex series sensors are certified according to EN 50014:1997 and EN 50020:2002 (see main certificate): Il 2 G EEx ia IIC T6 for use in flammable gas atmospheres They have been designed, manufactured and tested according to the state of the art. For their application the restrictions listed in the European Certificate of Conformity ZELM 03 ATEX 0170X and its 1. Supplement must be observed. A copy of the EC Type Examination Certificate forms a constituent part of these operating instructions.

Technical data	
Supply voltage	9 18 VDC, protected against reverse polarity
Current consumption	Max. 10 mA
Signal output	The supply is provided from the non Ex environment via an 820 Ohm resistor.
	The current impulses generated are analysed on this resistor. Pulse levels of 2.2
	V peak-peak are generated across the 820 Ohm resistor, with a d.c. component
	of ¾ supply voltage (see drawing).
	Short circuit proof and protected against reverse polarity.
Frequency range	0 Hz15 kHz
Electromagnetic	In accordance with 89/336/EG / EN 50081-2 / EN 50082-2:
compatibility (EMC)	Electrostatic discharge into housing, cable shield and wires: up to ±4 kV peak
	according to IEC 61000-4-2, severity level 2
	Radiated electromagnetic field: up to 30 V/m, 50% AM, 1 kHz in the range of
	1 MHz to 1000 MHz according to IEC 61000-4-3, severity level 3
	Electrical fast transients/bursts, coupled to sensor cable with a capacitive
	coupling clamp: up to ±4 kV peak according to IEC 61000-4-4, severity level 4
Housing	Stainless steel X12CrNiS188, material number 1.4305, front side hermetically
	sealed, electronic components potted in a chemical and age proof ceramic.
	Maximum permissible tightening torque:
	12 Nm for M12x1, 25 Nm for M14x1, 35 Nm for M16x1
	50 Nm for M18x1, 75 Nm for M22x1
	Dimensions according to table and drawings.
Cable	See below (type table).
Connector	See below (type table).
Pole wheel	Toothed wheel made of a magnetically permeable material (e.g. Steel 1.0036)
	Minimum tooth width 6 mm
	Side offset < 0.2 mm
	Eccentricity < 0.2mm
	Involute gear wheel preferred (module 1.0)
Air gap sensor / pole wheel	Air gap range for standard sensors:
	Module 1: 0.20.5 mm
	Module 2: 0.21.5 mm
	Module 4 (and larger): 0.22.5 mm
	For the following sensors the maximal air gaps listed above have to be reduced
	according to the value listed in the table and making it not useable for module 1
	gears:
	Sensor type Maximal air gap reduced by [mm]
	DSF 1715.01 AHV Ex-atex S3 0.4
	DSF 1815.01 AHV Ex-atex S173 0.3
	DSF 2215.01 AHV Ex-atex S175 0.3
	DSF 2215.02 AHV Ex-atex 0.5 DSF 2215.03 AHV Ex-atex 0.3
	DSF 2215.03 AHV Ex-atex 0.3
Insulation	Housing, cable screen (if applicable) and electronics galvanically separated
	(500 V/50 Hz/ 1 Min.)
Protection class	IP68 (head), IP67 (cable connection), IP 54 (where connector used)
Vibration immunity	5 g _n in the range 52000Hz
Shock immunity	50 g _n during 20 ms, half sine wave impact
Temperature	See tables on following pages. The restrictions given in the EC Type
Temperature	Examination Certificate and its 1. supplement must be adhered to.
	The minimum permissible operating temperature for all types is -20°C.
	The maximum permissible operating temperature depends upon the following
	parameters, as shown in the table below:
	Sensor housing size
	Maximum available electrical power from the intrinsically safe sensor power
	supply and from the intrinsically safe input circuit of the attached
	instrumentation and any Zener barriers.
	Ex temperature class (T1-T6)
	Extemperature diass (Tr-10)

EX-Safety and Marking	For this explosion proof sensors a copy of the European Certificate of Conformity ZELM 03 ATEX 0170X and its 1. Supplement is attached. See also below, the Ex related information in this documentation. A connection diagram for use with Zener barriers is provided on the following pages. Protection class: Il 2 G EEx ia IIC T6					
Connection	The sensor wires are susceptible to radiated noise. The following 2 points should therefore be noted: A screened 2 core cable must always be used for sensor connections. The screen must be taken all the way to the terminal provided on the instrumentation and not earthed. The sensor cables should be laid as far as possible from large electrical machines and on no account laid parallel to high voltage/current power lines. The maximum permissible cable length is limited from a safety point of view according to the 1. Supplement of the Certificate of Conformity ZELM 03 ATEX 0170X. Furthermore it is a function of the sensor voltage, cable routing, the capacitance and inductance characteristics of the cable and the max. signal frequency. In general however, it is advisable to keep the distance between sensor and instrumentation as short as possible. The sensor cables can be extended using junction boxes having IP20 rated terminals. (corresponding to DIN 40050 or IEC 529) We recommend the use of JAQUET extension cable art. no. 824L-31081.					
Installation	The screen must be connected to 0 Volts at the analysing device. For installation, the CE directives for the installation of apparatus in explosive environments must be taken into account. The housing has to be aligned to the pole wheel according to the sensor drawing: Deviations in positioning may affect the functioning and decrease the noise immunity of the sensor. The sensor should be mounted with the middle of the face side over the middle of the pole wheel. Where the pole wheel has teeth or slots and with radial sensor location, the sensor would normally be mounted over the centre. Dependent upon the wheel width, a certain degree of axial movement is permissible. However, the middle of the sensor must be at minimum in a distance of 3mm from the edge of the pole wheel under all operating conditions. A solid and vibration free mounting of the sensor is important. Eventual sensor vibration relative to the pole wheel can induce additional output pulses. The sensors are insensitive to oil, grease etc and can be installed in arduous conditions. During installation, the smallest possible pole wheel to sensor gap should be set. The gap should however be set to prevent the face of the sensor ever touching the pole wheel. Within the air gap specified the amplitude of the					
Maintenance	output signals is not influenced by the air gap. No maintenance required. The sensors cannot be repaired.

CE-Declaration of Conformity

According to the CE guidelines

- Electromagnetic compatibility 89/336/EWG
- · Apparatus used in explosive environment 94/4/EG

The apparatus

Typename: DSE ..15.xx .HV

Have been developed, and are constructed and produced in accordance with the guidelines 89/336/EG and 94/4/EG solely by :

company: JAQUET AG, Thannerstrasse 15, CH-4009 Schweiz.

The following harmonised standards are applicable:

- EN 50081-2, EN 50011, CISPR 16
- EN 50082-2, EN 61000-4-2/3/4/5/6/8/11
- EN 50014
- EN 50020
- EN 50284
- EN 1127
- EN ISO 9001:2000

The following national standards are applicable:

- IEC 60068-2-1/2/30/6
- VDE 0165

Full technical documentation is available.

The associated instruction manuals are available under following numbers :

- 3040-64471 for DSE xxxx Ex Atex in originallanguage.
- 304E-64471 for DSE xxxx Ex Atex in english.

Basel, the 25.08.2003

1. Supplement

(Supplement according to EC-Directive 94/9 Annex III letter 6)

to EC-type-examination Certificate

ZELM 03 ATEX 0170 X

Equipment: Rotation speed sensortype DSF .. 15.xx .. V Ex Atex

JAQUET AG Manufacturer:

Thannerstrasse 15, CH-4009 Basel Address:

Description of Supplement

The 1. Supplement considers application different length of the connecting cables for different types of

Additional to the maximum values of the effective inner capacitance and inductance mentioned in the EC-Type Examination Certificate following maximal values of the capacitance and inductance are to be considered by using connecting cables with the length of more than 5 m:

C; = 240 pF/m L; = 1,5 IJH/m

The explosion protection of the equipment is not affected by these changes.

The equipment may be used in future also in consideration of this Supplement.

The type of protection, all further data as weil as the special conditions remain unchanged and also apply to this 1. Supplement.

References:

The instruction manual has to be observed.

Report No.
