TE SENSOR SOLUTIONS

TE Connectivity (TE) is a global technology leader, providing connectivity and sensor solutions essential in today's increasingly connected world. TE is one of the largest sensor companies in the world. Our sensors are vital to the next generation of data-driven technology. We offer an unmatched portfolio of solutions for applications across a wide range of industries, including Automotive, Industrial, Medical, Appliance, Aerospace & Defense, and Industrial and Commercial Transportation. Our technologies enable measurement capabilities such as pressure, temperature, position, vibration, humidity and fluid property, to name a few. Our engineers help transform concepts into creations — redefining what's possible using intelligent, efficient and high performing TE products and solutions proven in harsh environments.

AEROSPACE & DEFENSE

APPLICATION SOLUTIONS

When quality and reliability are paramount, aerospace & defense companies rely on our technology to help solve mission critical challenges. Our core competencies in high reliability sensors for harsh environments such as temperature extremes, RFI, EMI, vibration, and lightning strikes make us a leading choice in sensor technology. Our design engineering capabilities, as well as AS9100 certified sensor manufacturing facilities in North America, Europe and Asia Pacific, support Tier 1, 2 and 3 providers. Regional design and manufacturing capabilities enable us to provide ITAR-free designs and supply products closer to our customers. We work closely with the customer to provide stable, reliable and cost effective solutions that meet the extensive development cycles and qualifications critical to aerospace & defense.

Cockpit Controls

- Automatic autopilot disconnect force sensors
- Motorized potentiometers for position feedback
- Brake pedal position sensors
- Rotary panel switches and sensors
- Force sensors for flight data recording of pilot inputs
- Throttle quadrant position sensors
- Flap and spoiler lever position sensors

Flight Controls & Actuation

- High lift load sensors
- THSA secondary load path engagement sensors
- Aileron LVDT position sensors
- Resolvers for flap and slat position monitoring
- Force and position sensors for spoiler electromechanical actuation
- Brake actuator force sensors for rotorcraft

Landing Gear & Brakes

- Brake torque sensors
- Pressure sensors for nose wheel steering feedback
- Resolvers for steering position
- Load on wheels force sensors
- Center of gravity force sensors

Cabin, Galley & Cargo

- Cabin pressure indicator sensors
- Waste tank level sensors
- Environmental cabin control pressure sensors
- Cargo humidity sensors
- Galley temperature sensors
- Air quality temperature sensors
- Oxygen generation pressure transducers

Launch & Space

- Payload monitoring vibration sensors
- Thrust vectoring LVDT position sensors
- Electrical actuator position resolvers
- Booster separation potentiometers
- Cryogenic fuel pressure transducers
- Satellite temperature sensors
- Mirror/antenna position LVDT sensors

Engine, Turbine & APU

- Thermocouple harnesses for exhaust gas temperature
- LVDT for thrust reverser position monitoring
- Platinum 200 air temperature sensors
- Variable bleed valve LVDT position sensors
- Rotor track and balance accelerometers
- Health and Usage Monitoring Systems (HUMS) accelerometers
- Thermistor heater fuel tank level and flow

Military (Missile, Ground Vehicle, Marine, UAV)

- Missile fin actuation
- Fuel tank level and flow sensors
- Gun stabilization and shock measurement
- Tamper detection for missiles
- Electronic safe arm and fire
- Oil pressure and temperature sensors
- Airspeed and altitude sensors

APPLIANCES

Today's smart and green appliances are built using more efficient designs, meeting the latest regulations while saving energy, water and time. Customers rely on our sensor technologies to enable appliances to respond to human touch, sense vibration, adjust to loads, and operate more efficiently. We work to develop custom solutions that can monitor humidity and water levels, and temperature. Our products contribute to new levels of convenience and productivity in a wide range of household appliances.

APPLICATION SOLUTIONS

Clothes Dryer

- Humidity sensor monitors process humidity and stops the dryer when clothes are dry
- Thermopile measures clothing temperature to prevent overheating and fabric damage
- Force sensor measures payload weight at the beginning of the cycle

Cooktop

- Temperature sensor monitors glass surface temperature for cooking control and "hot" indication lights for user safety

Dishwasher

- Magnetoresistive (MR) sensor and magnet verifies spray arm rotation
- Temperature sensor measures water temperature and controls heating elements
- Liquid level sensor monitors water level and detergent dispenser level

Household Oven

- Temperature probe monitors cooking temperature
- Temperature sensor monitors pyrolytic cleaning temperature and controls door latch

Microwave Oven

- Humidity sensor monitors food moisture content during cooking
- Thermopile measures food temperature without physical contact
- Force sensor measures food weight on the turntable

Refrigerator

- Temperature sensor monitors the freezer and refrigerator cabinets as part of the control system
- Humidity sensor monitors humidity in produce drawers and compartments
- Humidity sensor monitors ambient room humidity to help manage frost prevention and doorframe condensation

Small Appliances

- Temperature sensor measures liquid and heating element temperatures in toaster ovens, coffee makers, and popcorn poppers
- Humidity sensor monitors relative humidity and steam production for espresso machines, and clothes steamers

Washing Machine

- Temperature sensor measures water temperature and controls heating elements
- Pressure sensor monitors water level
- Vibration sensor detects out-of-balance conditions during spin cycle
- Proximity sensor verifies door closed and latched before start of the wash cycle
- Force sensor measures payload weight at the beginning of the wash cycle

AUTOMATION & CONTROL

APPLICATION SOLUTIONS

Automation & Control includes a wide range of industrial applications that span all markets, and at all levels, from the factory floor and process end users, to integrators and large scale OEM production. Industrial production is increasingly driven by greater automation, safety and energy efficiency. Our broad portfolio of products offers many options to meet custom performance, application and regulation/certification requirements.

Pressure Sensing

- Analog and digital pressure sensing modules
- Altimeter pressure module
- Media isolated pressure sensing modules
- Heavy industrial pressure transducers
- Miniature pressure transducers
- Corrosion-resistant pressure transducers
- Differential pressure transducers

Fluid Sensing

- Ultrasonic liquid level sensors
- Fluid property sensors
- Submersible pressure sensors

Temperature Sensing

- RTDs
- Thermocouples
- Temperature probes

Motion Control

- String and linear potentiometers
- LVDTs and RVDTs
- Rotary encoders and tilt sensors

Vibration Sensing & Position/Presence Sensing/Detection

- LVDT
- Load cells
- MR sensors
- Accelerometers
- Inclinometers

Force & Torque Sensing

- Load cells and multicomponent force sensors
- Contact/non-contact torque sensors

Humidity Sensing

- Humidity sensing modules
- Digital humidity sensors and assemblies

CONSUMER

Whether it's an altimeter built into a wearable band to measure how many steps we climb each day, or a sports watch charting the ascent up one of the world's highest mountain peaks, our miniature sensors are used to convey critical information for the dashboard of our daily lives. Our dive computer sensors help provide safety in leisure activities, while our piezo film enables your bed to monitor your heart rate, breathing and even how well you sleep. We've been making sensors for wearables before there were wearables. We're recognized for our technical skill in miniaturization, low power consumption, and high-performance. That's why our sensors are in harsh environments, from the world's highest parachute jump to the deepest dive.

APPLICATION SOLUTIONS

Mobile (Smart) Phones

- Barometric pressure sensor to measure altitude and in-building telemetry for emergency call
- Humidity sensor for personal environment adaption and home comfort control system

Multi-Function Watches

- Barometric pressure sensor to measure altitude and in-building telemetry
- Photo optic (SpO_2) sensor for heart-rate monitoring
- Altimeter to measure floors climbed and calorie estimation

Fitness Equipment

- Force sensor for pedal force and energy measurement

Sleep Monitors

- Piezo film detects body movement and vital signs to determine sleep phase and quality

Dive Computers

- Water pressure sensor to measure dive depth

Hobby Drone/Unmanned Aerial Vehicles (UAV)

- Barometric pressure sensor to regulate and report altitude and confirm vertical stability
- MR sensors for the camera 3D stabilization platforms
- NTC temperature sensors to monitor charging for high capacity LiPo batteries

Air Quality Monitors/ Room Comfort

- Humidity sensor for personal environment adaption and home comfort control system
- Miniature digital pressure sensor for barometric pressure

Weather Stations

- Miniature digital pressure sensor for barometric pressure and trend
- Miniature digital humidity sensor for atmospheric humidity and trend
- Reed switch or MR sensor for wind-speed measurement
- Temperature sensor for environmental monitoring

Smart Writing Tools

- Piezo film ultrasonic components in smartphone and whiteboard digitizers for graphics and handwriting capture

GPS Devices

- Barometric pressure sensor for altitude and navigation dead-reckoning

Cycle Computers

- Barometric pressure sensor for altitude profile and energy consumption

Smart Scales

- Force sensor for body weight
- Barometric compensation for air quality sensor

Smart Sensor Hub

- TE Connectivity offers a variety of smart sensor hub development tools optimized to aid engineers with integrating sensors into their product designs

INDUSTRIAL

APPLICATION SOLUTIONS

While the future of the Industrial Internet of Things (IIoT) is not yet certain, one thing is: sensors will play a critical role. Industrial applications span a wide range of applications, from banknote handling to printers and ovens. Our broad portfolio of products offers customers many options to meet specific performance, application and certification requirements. We work closely to help identify the best solution to meet the needs of the customer.

INTELLIGENT BUILDINGS

Buildings today require reliable solutions to confirm they are operating safely and efficiently. As a global designer and manufacturer of sensors and sensor-based systems, we work closely with building engineers in both the development and instrumentation of automated systems. Our sensors are designed and manufactured to exacting specifications, often on a custom basis. Together with our customers, we are working to solve today's toughest challenges. Our portfolio can address the breadth and depth of applications needed for today's intelligent buildings.

APPLICATION SOLUTIONS

Burners & Boilers

- Inlet and outlet water temperature
- Inside and outside air temperature
- Level detection

Chillers, Compressors & Heat Pumps

- Inlet and outlet refrigerant temperature and pressure
- Inside and outside air temperature
- Motor temperature, oil pressure, and temperature

Wall-mount Units & Field Devices

- Air temperature and humidity
- Damper position
- Air differential pressure

Variable Air Volume (VAV)

- Inlet and outlet air temperature and pressure
- Air humidity

Elevators

- Elevator car position

Security

- Door and window position

MEDICAL

Because accurate monitoring, diagnosis and treatment counts, today's medical devices rely on our high-performance sensor technologies to meet exacting specifications, including ISO 13485 certification and FDA registration. We are a leading provider of sensor solutions to the medical device market. Our engineers work with device manufacturers to provide application-specific, standard and custom requirements, from product concept through manufacturing. Our sensors meet the rigorous demands of a wide range of medical and healthcare applications.

APPLICATION SOLUTIONS

Cardiovascular Monitoring & Diagnosis

- Disposable blood pressure sensor
- Piezo film for electronic stethoscope
- Piezo film sensor for heart rhythm monitoring
- Photo optic sensors for pulse oximetry (SpO_2)
- Miniature NTC thermistors for thermo dilution
- Piezo ultrasonic transducers and temperature sensors for ultrasound imaging

Cardiovascular Treatment

- Force, pressure and temperature sensors for ablation catheter
- Silicon MEMS pressure sensor for angioplasty balloon inflating pump
- Temperature sensors and silicon MEMS pressure sensors for blood transfusion and oxygenation systems
- Silicon MEMS pressure sensor for contrast dye infusion
- Piezo film for discrete vital signs monitoring
- Temperature sensors for myocardial needle probes
- Piezo film and position MR sensor for pacemaker
- Variety of sensor solutions for ventilators and respirators

Patient Monitoring & Diagnosis

- Microfused load cell for body weight
- Piezoelectric transducers for bone density
- Piezo film for hospital bed vital signs
- Temperature sensor for skin temperature
- Pressure and temperature sensors for urinary catheters and urodynamic testing
- Variety of sensors for sleep apnea studies
- Thermopile for non-contact thermometry
- Thermistors for contact thermometry

Patient Treatment

- MR sensor for insulin pump
- Ultrasonic sensor for bubble and liquid level detection
- Variety of sensor solutions for dialysis machines, infusion pumps and smart beds
- Silicon MEMS pressure sensor for hospital gas monitoring
- Humidity and temperature sensors for premature newborn cabinet
- Variety of sensor solutions for ventilators and respirators
- Force sensors for infusion pumps

Surgical/Delivery

- Silicon MEMS pressure sensor and piezo film for assisted baby delivery
- Miniature temperature sensors for brain tumor hypodermic needle probes
- Force and pressure sensors for endoscopic surgery
- Low-cost miniature silicon MEMS pressure sensors for intrauterine monitoring during labor
- Silicon MEMS pressure sensor for ocular surgery
- Temperature sensor for patient warming/cooling
- Cable extension sensors and rotary encoders for robotic surgery
- Variety of sensor solutions for surgical devices and instruments
- Piezo film sensor for anesthesia delivery

Home & Mobile Health Care/Wearable Medical Devices

- Sensors for wearable health devices
- Sensors for mobile infusion and insulin pumps
- Sensors for mobile oxygen delivery
- Altitude pressure sensor for patient fall detection

OIL & GAS

The energy market continues to face new challenges with deeper drilling, higher temperatures and higher pressures. Our latest sensor technologies with new electronics, materials, and design packages provide safe, reliable, and accurate data measurements—all while enduring some of the harshest application environments on earth. By combining application expertise and global hazardous location certifications, our broad portfolio of standard designs and custom packages are helping to improve performance and reliability for the oil and gas industry.

APPLICATION SOLUTIONS

Sub-sea Valve Position Feedback

- Nickel alloy construction for maximum corrosion resistance for 30 year life expectancy
- Latest analog and digital signal processing including CANbus CiA443
- Sub-sea pressure up to 7,500 psi (517 bar)

Power Generation Valve Position

- Valve position measurement for high temperature steam, gas and nuclear turbines
- CSA and ATEX intrinsically safe certified for hazardous locations
- Signal conditioning with analog and digital RS-485 outputs

Down-hole Borescope Position Sensing

- High pressure designs (Vented designs up to 35,000 psi)
- Continuous operation at 400°F
- Custom designs and packages available

Upstream Well-head Monitoring

- Global certifications including UL, CSA, ATEX, and IECEx
- Latest sensing MEMS technology with solid stainless steel or alloy construction
- Low current consumption options for RTU/SCADA applications

Gas Compression

- Certified for Class I Divisions I and II, ATEX, and IECEx
- Gage, compound, bidirectional, absolute, and differential pressure ranges
- Compact designs

Offshore Rigs

- Intrinsically safe and explosion proof designs up to 20,000 psi (1,379 bar)
- IEC 61508 SIL2 certification
- High strength nickel alloy for high H2S content
- BOP transmitter packaging with sub-sea connectors

Hydraulic Fracturing Equipment

- Hammer union pressure transmitters with modular design
- Flush diaphragm pressure transducers for water pressure monitoring
- Robust temperature transmitters

Work Boats

- ABS type approval
- Flush diaphragm sensors for ballast level monitoring
- PVDF/PTFE submersible sensors for tank level measurement

Chemical Tanks & Totes

- Internally and externally mounted pressure transducers from 1 psi
- Optional PVDF/PTFE materials for corrosive liquids
- Intrinsically safe ratings for hazardous areas

TEST & MEASUREMENT

APPLICATION SOLUTIONS

Our sensors for test and measurement applications support customers across all of our market verticals. Our sensor technologies and engineering capabilities are used for product research, development, testing and evaluation (RDT&E). Each of these critical areas has unique technology and performance requirements. We work closely with RDT&E engineers to determine the right solution, as our broad portfolio can address the breadth and depth of applications across a number of markets.

Aero Test: Aerodynamic Research and Flight Testing

- Pressure scanners for turbine engine R&D for aircraft and power generation
- Pressure scanners to facilitate aerodynamic testing in wind tunnel
- Pressure scanners used in rotorcraft and aircraft flight testing

Auto Test: Automotive Safety & Design Testing

- Accelerometers for use in automotive crash testing
- Force sensors used in seat belts and crash test dummies
- Pressure and position transducers designed for use in motorsport

Road Traffic Monitoring

- Complete solutions and installation support for weigh-in-motion, speed and vehicle classification/count applications

Environmental Monitoring/ Water Monitoring

- Pressure sensors for monitoring water usage (i.e. waste water)
- Level transducers used in managing water resources (i.e. reservoir)

Test Equipment & Instrumentation

- Standard and custom sensors supporting aerospace and defense industries
- Broad array of sensors supporting general R&D in academic, public and private sectors

DIGITAL COMPONENT SENSOR DEVELOPMENT TOOLS

Many of our digital sensor products are available in low power and small form factors. They are suited for wearable and miniature devices that are used to collect and share critical data for health monitoring, fitness, air quality, aerospace, battery powered, and related applications. To increase knowledge sharing and reduce time to market, we have teamed with semiconductor manufacturers to design and provide plug and play tools for Xplained Pro Sensor Hub, MicroChip PicTail, and Digilent Pmod™ based development platforms. In addition, we offer several wireless demo/development tools to help engineers quickly achieve their design objectives with wireless applications. These tools are supported with software/firmware drivers, documentation, and graphic user interfaces to make the development process easy.

FLOW SENSORS

We manufacture reliable and accurate mass air flow (MAF) sensors for a variety of automotive, medical and industrial gas flow applications. Our flow switches are suitable for hot and cold potable water due to rugged brass housings and the ability to operate from a small head of water. They are typically mounted in a well-defined channel, directly in the flowing media. Our flow switches are designed for water control, power shower, central heating systems, circulation pump protection, cooling and leak detection. They feature reed switch reliability and are easy to install.

FORCE SENSORS

We are a pioneer in the design and manufacture of precision force sensors for applications that require high performance or unique packaging, including electromechanical flight control, test and measurement and ultra-low cost OEM load cells for medium to high volumes. Based on our proprietary piezoresistive silicon strain gage (Microfused) technology, our sensors combine durability and long-term stability in extremely low cost packages. Our flight-qualified sensors monitor secondary load path engagement and supply real-time information from primary flight control forces to the flight data recorder (Black Box). Other applications include force feedback for the autopilot automatic disconnect function and flap jam detection systems. Our OEM and Test and Measurement (T&M) load cells offer custom packaging and electronics with analog or digital outputs, suited for both low and high force environments.

HUMIDITY SENSORS

We offer a complete range of calibrated and amplified products that measure relative humidity (RH). Based on our robust patented capacitive technology, these sensors provide accurate measurement of dew point and absolute humidity by combining relative humidity and temperature measurements. Our sensors are qualified for the most demanding applications, including automotive, heavy truck, aerospace and home appliances. We offer a variety of output signals such as digital (Frequency, I²C) and analog voltage, as well as, customized and proprietary output signals including PWM, PDM, LIN and CAN.

HUMIDITY AND TEMPERATURE (NTC) COMPONENTS

Analog Output

	MEAS HS1101LF
Package	Through hole TO39 with side opening plastic cap
Type	Capacitive humidity
Operating RH Range	0 to 100% RH
Operating Temp.	-60°C to 140°C
Unique Features	• Robust and recognized component • Suitable for most humidity applications • Cost effective solution
Accuracy	180 pF, ±3 pF at 55% RH
Dimensions (mm)	10 x 10 x 19
Typical Applications	Applications requiring a robust humidity sensor in automotive, home appliance, outdoor, HVACR, consumer, printer, meteorology

LIQUID LEVEL SENSORS

Our full range of liquid level sensors help address critical requirements for the construction, off-road, and automotive industries. TE solutions include sensors for measuring power steering fluid, coolant, windscreen wash, fuel and oil. Our pride is our experience in serving the heavy duty vehicle markets: truck and bus, emergency, military, recreational, luxury and coach. We also offer level sensors for storage and collection tanks, vending machines, showers for the disabled, heat exchangers, washing machines, central heating systems and boilers. To meet the unique requirements of the food and beverage industry, TE offers a range of standard cost-effective products. We also provide thousands of sensors annually to marine engine manufacturers.

PHOTO OPTIC SENSORS

Optic-based sensors include both photo optic components and complete sensor solutions. Our component series features dual LED, bi-wavelength emitters and spectrally paired photo detectors. Our optics are suited for medical applications where selection of peak wavelength is a priority, such as pulse oximetry (SpO_2). We also package our optics into complete probe assemblies for pulse oximetry monitoring applications. Our SpO_2 probe platform includes reusable finger clips, soft silicone boots, and a range of disposable sensors.

PIEZO FILM SENSORS

Our piezo film sensors provide durable vibration, accelerometer, or dynamic switch elements for a wide range of markets and applications. Piezoelectric fluoropolymer film has unique capabilities and produces voltage or charge proportional to dynamic strain. The film is suited for many different custom designs, configurations and applications, including versatile coaxial cable used for everything from security to musical instrument amplification.

POSITION SENSORS

We are a leading manufacturer of industrial linear and angular position, tilt and fluid level sensors. Both off-the-shelf and custom position sensing solutions are available featuring our core technologies, including inductive, potentiometric, magnetoresistive, hall effect, reed switch, electrolytic and capacitive sensing. Sophisticated designs and manufacturing techniques provide reliable and cost effective solutions for a broad range of harsh applications such as automotive, power generation, subsea, hydraulics, medical, HVACR, process controls, factory automation, security systems, military/aerospace and nuclear. TE position sensors are available with analog and digital outputs. Our comprehensive range of signal conditioning instrumentation enables us to meet the specific needs of OEMs and end users.

MEAS HR

Package	AISI-400 series stainless steel
Linearity	±0.25% of range
Excitation	AC operated
Output	AC voltage
Range	±0.05 to ±10 inches
Unique Features	• Large bore to core clearance • Broad range of excitation frequencies • Variety of options • Mild radiation resistance option
Operating Temp.	-55°C to 150°C (220°C optional)
Diameter (mm)	20.6
Typical Applications	General industrial

MEAS M12

Package	AISI-304 series stainless steel
Linearity	±0.25% of range
Excitation	AC operated
Output	AC voltage
Range	±10 to ±100 mm
Unique Features	• Metric series • High stroke to length ratio • Constant sum of secondaries • Excellent temperature coefficient
Operating Temp.	-55°C to 150°C (220°C optional)
Diameter (mm)	12
Typical Applications	Hydraulic spool valve position feedback, flight simulators, aircraft flight control feedback

MEAS HC

Package	AISI-400 series stainless steel
Linearity	±0.25% of range
Excitation	AC and DC operated versions
Output	AC or DC voltage, 4 - 20 mA loop or RS-485
Range	±0.05 to ±10 inches
Unique Features	• Hermetically sealed • Welded connector • Double shielding • Intrinsically safe version • CE mark for DC versions
Operating Temp.	-55°C to 150°C (AC); 0°C to 70°C (DC)
Diameter (mm)	19
Typical Applications	Harsh environments, submersible applications, process controls, valve position feedback

MEAS XS-C

Package	AISI-304 series stainless steel
Linearity	±0.25% of range
Excitation	AC operated
Output	AC voltage
Range	±0.25, ±0.5 and ±1 inches
Unique Features	• High pressure • Bulkhead mounting • Hermetically sealed welded assembly
Operating Temp.	-55°C to 150°C
Diameter (mm)	19
Typical Applications	Hydraulic actuators, other pressurized vessels

MEAS DC-SE

Package	AISI-400 series stainless steel
Linearity	±0.25% of range
Excitation	8.5 to 28 VDC
Output	0 - 5 VDC (4 wire), 1 - 6 VDC (3 wire)
Range	0 - 0.1 to 0 - 6 inches
Unique Features	• CE mark • Low current consumption (6 mA typical) • Synchronous demodulation • Shielded cable
Operating Temp.	-25°C to 85°C
Diameter (mm)	19
Typical Applications	Positioning sensing feedback, battery operated systems, test labs, ram guide, platen position

MEAS XS-D

Package	AISI-400 series stainless steel
Linearity	±2% of range
Excitation	AC operated
Output	AC voltage
Range	±1 to ±10 inches
Unique Features	• Very high stroke to body length ratio
Operating Temp.	-55°C to 150°C
Diameter (mm)	20.6
Typical Applications	Where sensor installation length is restricted, ideal replacement for linear potentiometers

PRESSURE SENSORS

We design and manufacture pressure sensors ranging from the sensing element to system packaging for harsh environments. We are an industry leader for our range of both standard and custom pressure sensors, from board level components to fully amplified and packaged transducers. Based on piezoresistive Microelectromechanical (MEMS) and silicon strain gage (Microfused, Krystal Bond) technology, our sensors measure everything from inches of water column (<5 mbar) to 100K psi (7K bar). Sophisticated design and advanced manufacturing techniques create reliable cost-effective solutions for medical, HVACR, off road/heavy equipment and general industrial applications. We manufacture one of the world's lowest power and smallest package pressure sensors for altimeter/NAV applications. Our sensors are signal conditioned, calibrated over temperature and include digital or analog outputs.

SCANNERS AND SYSTEMS

The test and measurement group of TE Connectivity provides data systems based on the electronic pressure and temperature scanners of legacy brand Pressure Systems (PSI). These products have been developed specifically for wind tunnel testing, flight testing and turbomachinery test and measurement applications. Extensive factory calibration combined with custom MEMS-like technology provide system solutions with high accuracy digital interface to host computers and networks. Pressure ranges are available from 1.3" H_2O (300 Pa) to 10,000 psi (69 MPa). Temperature inputs can be acquired from standard and custom thermocouples as well as RTDs. Software is included with each solution.

TORQUE SENSORS

Our torque sensors use advanced strain gage technology to satisfy the most demanding requirements for static and dynamic applications. We offer solutions for measuring reaction torque and rotating torque. Our torque meters complete with integral mechanical stops increase overload capacity and provide additional protection during mounting and operation. We offer a variety of small capacity sensors for dynamic and reaction torque measurements. Our combination sensors simultaneously measure reaction torques and forces with a single device. They can also detect angle position and provide velocity measurement. We can customize a wide range of available models to meet your specific needs.

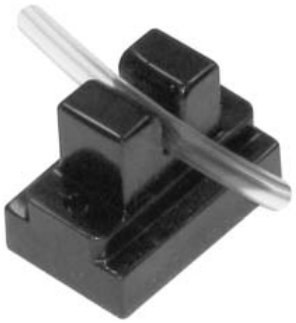
ULTRASONIC SENSORS

(air bubble, point level, continuous level monitoring)



TE Connectivity offers a wide range of level sensors using ultrasonic technology. Our ultrasonic sensors measure liquid level despite variations in transparency, viscosity, color or dielectric. These solutions include air bubble detection for medical pumps; point and continuous level sensors for the semi-conductor and high purity markets; and point level sensors for a variety of process control applications. We offer high accuracy, high frequency, short range continuous measurement sensors through air for process control. We also offer standard products that provide a system without moving parts, adjustments, or maintenance. TE works closely with OEMs to offer custom sensors suited for temperature ranges of -30°C to 150°C, pressures to 1,000 psi, various input/output configurations and multiple sensing points.

VIBRATION SENSORS

TE has spent more than 20 years designing and manufacturing accelerometers based on our proprietary Microelectromechanical System (MEMS), bonded gage and piezoelectric ceramic/film technologies. Voltage mode piezoelectric is the most popular accelerometer design due to its high level output and wide bandwidth. We offer voltage mode accelerometers in the traditional 3-wire or 2-wire (IEPE) configurations. Charge mode piezoelectric accelerometers measure shock and vibration in high temperature environments. In addition to its high temperature operating capability when used with a high quality charge amplifier, a charge mode accelerometer offers dynamic range scalability. To measure motion (velocity, displacement) accurately, an accelerometer or with DC response is required. Incorporating MEMS technologies and the latest analog and digital ASICs, our DC accelerometers offer high performance and exceptional value. All products are EAR99 and RoHS compliant.

WATER LEVEL SENSORS

We are a leader in the water resources monitoring market with long standing experience in the design and manufacture of water level and water quality sensors. Our expertise in media isolated pressure sensors offers unique advantages in creative product development and consistent product performance. Water level transducers can be customized and are available in a wide range of accuracies, materials, and cabling. With your choice of analog or digital output, our sensors are easily adapted to any data system. Or, use self-powered units with onboard memory for long term deployment. We also provide water quality instrumentation for analyzing lakes, rivers, estuaries, and aquifers worldwide. Our CTD models measure conductivity, temperature, and depth critical to water resources improvement and preservation.

EVERY CONNECTION COUNTS

TE Connectivity is a global technology leader. Our connectivity and sensor solutions are essential in today's increasingly connected world. If data, signal or power moves through it, TE connects and senses it.

TE designs, manufactures and delivers products, systems and solutions in over 150 countries. This global reach enables us to work closely with our customers and identify and act on local needs quickly. By leveraging our global scale, we can deliver the highest levels of quality, innovation and service at a local level.

GLOSSARY OF COMMON SENSOR TERMS

AUTHORIZED DISTRIBUTOR

Calibration
Testing of a sensor to confirm output is within a specified range for particular values of the input.

Compensated Temperature Range
The temperature range in which the sensor meets the specifications for Thermal Zero Shift and Thermal Sensitivity Shift.

DeviceNet™
Device level network for industrial automation.

Excitation
The recommended voltage with which a standard sensor should be excited.

Full Scale Output (FSO)
Full Scale Output (FSO) is the span between the lowest range limit and the highest range limit of the sensor. Published values are approximate values and may vary with each sensor.

Hysteresis
Hysteresis is the difference in sensor output signal at a specific input when applied in the increasing and then decreasing sectors of a single cycle of short time duration at constant temperature. It is expressed as a percentage of FSO.

Natural Frequency
Natural Frequency is the frequency at which the sensor's active sensing element goes into resonance and responds with maximum movement for a specific applied input.

Non-linearity
Non-linearity is the deviation of the sensor output signal from a theoretical straight line which has been fitted to the data points of an actual calibration. It expresses the maximum deviation of all data points in that calibration and is sometime expressed as a percentage of FSO, usually as a ±% error band, or % of reading.

Non-Repeatability
Non-repeatability is the deviation in sensor output signal levels when a specific input is applied in consecutive cycles of short time duration under the same conditions, such as temperature and direction of increasing or decreasing input. It can be determined by performing two consecutive short time duration calibration cycles and can be expressed as ±%FSO.

Operating Temperature
The temperature range within which a sensor will meet all of its stated specifications while powered and in operation.

Over-range Limit
The over-range limit is the maximum input to which the sensor can be exposed without damage.

Plug and Play
Sensors designed for end-users who expect sensors to meet calibration performance standards once power and signal cables are properly connected to instrumentation.

Root Mean Square
The square root of the arithmetical mean of a set of squared instantaneous values

Sealing
Sealing is the assembly method by which the sensor is protected from moisture in the surrounding environment. The most desirable sealing method is hermetically seal. This can be achieved by joining the individual piece parts together by soldering, welding, brazing, glassing, or other commonly accepted manufacturing processes. Another common sealing method is epoxy seal. It is achieved by joining the piece parts by applying adhesive or potting compound to mitigate the incursion of moisture into the sensor assembly.

Sensitivity
The sensor's change in output per the unit change in the physical parameter being measured. The change may be linear or non-linear.

Thermal Sensitivity Shift (TSS)
The change in sensitivity of the sensor as a function of temperature. It is usually expressed as a percent reading change in sensitivity for a specified change in temperature such as ±0.01%/°C and is generally linear with moderate temperature changes. The Thermal Sensitivity Shift can be eliminated or minimized by using sensitivity numbers determined at or near the temperature of use.

Thermal Zero Shift (TZS)
The change in the Zero Offset as a function of temperature is the Thermal Zero Shift. It may be expressed as either a %FSO for a specific temperature change such as ±0.01%FSO/°C or in voltage units such as ±0.2 mV/°C and it is not a linear function.

Total Error Band (TEB)
Typically expressed as a percentage, the TEB is the combination of possible errors for a sensing device within its measurement range and temperature of operation.

CSA	Canadian Standards Association
CT	Computed Tomography
cUL	Tested to Canadian Standards by Underwriters' Laboratories
DC	Direct Current
DCS	Distributed Control System
DEF	Diesel Exhaust Fluid
DTC	Digital Temperature Compensation
ECU	Engine Control Unit
EGR	Exhaust Gas Recirculation
EMC	Electromagnetic Compatibility
EMI	Electromagnetic Interference
ESA	European Space Agency
FLS	Field Loadable Software
FM	Factory Mutual
FPGA	Field Programmable Gate Array
FS	Full Scale
FSO	Full Scale Output
FT LBS	Foot Pounds
GPS	Global Positioning System
HUMS	Health Usage and Monitoring System
HVACR	Heating, Ventilation, Air Conditioning, and Refrigeration
HVD	High-Voltage Differential
HZ	Hertz
I²C	Inter-Integrated Circuit
IEC	International Electrical Commission
IECEx	International Electrotechnical Commission Explosive
IEEE	Institute of Electrical and Electronics Engineers
IEPE	Integral Electronic Piezoelectric
IP	Ingress Protection
ISO	International Organization for Standardization
ITAR	International Traffic in Arms Regulations
kHz	Kilohertz
LED	Light Emitting Diode
LIN	Local Interconnect Network
LVD	Low Voltage Differential
LVDT	Linear Variable Displacement Transducers
mA	Milliamp
MAF	Mass Air Flow
mbar	Millibar
MCR	Main Control Room
MEMS	Microelectromechanical Systems
mHZ	Megahertz
mm	Millimeter
MQS	Military Qualification Standards
MR	Magnetoresistive
mV	Millivolt
NAV	Navigation
NASA	National Aeronautics and Space Administration
NEMA	National Electrical Manufacturers Association
NIST	National Institute of Standards and Technology
NOx	Nitrogen Oxide
NPT	National Pipe Tapered
NSF	National Science Foundation
NTC	Negative Temperature Coefficient
OEM	Original Equipment Manufacturer
PCB	Printed Circuit Board
PDF	Portable Document Format
PDM	Pulse Density Modulation
PE	Piezoelectric
PLCD	Permanent Magnet Linear Displacement Sensor
PPS	Polyphenylene Sulfide
PSI	Pounds Per Square Inch
PSIA	Pounds Per Square Inch-Absolute Reference
PSID	Pounds Per Square Inch-Differential Reference
PSIG	Pounds Per Square Inch-Gage Reference
PSIS	Pounds Per Square Inch-Sealed Gage Reference
PTFE	Polytetrafluoroethylene
PUDF	Public Use Data File
PWM	Pulse Width Modulation
R&D	Research and Development
RDT&E	Research, Development, Test & Evaluation
RFI	Radio Frequency Interference
RH	Relative Humidity
RMS	Root Mean Square
RoHS	Restriction of Hazardous Substances
RPM	Revolutions Per Minute
RTD	Resistance Temperature Detector
RTU	Remote Terminal Unit
RVDT	Rotary Variable Differential Transformer
SAE	Society of Automotive Engineering
SCADA	Supervisory Control and Data Acquisition
SCR	Selective Catalytic Reduction
SDI-12	Serial Data Interface at 1200 Baud
SMD	Surface Mount Device
$Sp0_2$	Pulse Oximeter Oxygen Saturation
SPDT	Single Pole, Double Throw
SPI	Serial Peripheral Interface
SPST	Single Pole, Single Throw
T&M	Test & Measurement
TDFN	Thin Duel Flats No Leads
TE	TE Connectivity
TEB	Total Error Band
TESS	TE Sensor Solutions
THSA	Trimmable Horizontal Stabilizer Actuators
TPMS	Tire Pressure Monitoring System
TSYS	Temperature System Sensor
UAV	Unmanned Aerial Vehicle
uC	Microcontroller
UL	Underwriters Laboratories
USB	Universal Serial Bus
VAV	Variable Air Volume
VDC	Volts Direct Current
WEEE	Waste Electrical and Electronic Equipment
