## Timing Diagram

Kilovac 1800/1900 series delay on operate timer modules combine solid state timing circuits with solid state switch outputs in robust hermetically sealed enclosures. The 1800 types are fixed timers, while the 1900 models are adjustable via an external resistor. The 1 Form A (SPST-NO) switch is rated 300 mA .

## Adjustable Timing Formula (1900 types)

The resistance required to obtain timing within this range is determined by using the formula:
$R x=400 \mathrm{~K}$ (T/Tmax.) - 40K, where
$R x=$ External Resistance in Ohms,
T- Desired Time in Seconds, and Tmax. = Maximum Time (Code).
A high quality deposited carbon $\pm 1 \%$, 0.1 W (min.) resistor is recommended for external resistance.
