- ◆ User Configurable to ± 70 g

Inertial Measurements Made Fast and Easy

These Measurement Specialties digital accelerometers are complete, easy-to-use, user-configurable sensors containing one to three accelerometers, a temperature sensor, signal processor, RS-485 interface and three analog outputs in a small, easy-to-install package.

All channels are sampled simultaneously to avoid data skewing. The digital signal processor takes 16-bit samples, filters, ranges, and calibration compensates at up to 42,500 samples/sec/channel. Digital data can be streamed out at up to 3 Mbit/sec.

The output range, filter frequency and calibration of each channel, as well as telemetry configuration, can be set by the user via the RS-485 command processor. CRC-8 and CRC-16 error checking is used to ensure command and data integrity.

The built-in temperature sensor can be used by critical applications to correct for any residual temperature effects.

Features and Benefits

User Configurable Settings

The analog/digital output range and low-pass filter of each digital accelerometer axis can be set via a built-in RS-485 interface using a free, downloadable Instrument Configuration Utility (ICU). An RS-485 to RS-232 adapter is available.

RS-485 Serial and Analog Outputs

Calibrated, ranged and filtered data can be streamed out at up to 3 Mbit/sec via RS-485. Analog output of up to three calibrated, ranged and filtered channels are provided for compatibility with existing systems.

High Accuracy and Linearity over Wide Temperature Range

Accelerometer accuracy is improved by minimizing variations due to temperature and aging effects. Each axial sensor has been tested and compensated over the -40 to $+85^{\circ}\text{C}$ temperature range.

Built-in Calibration

Calibration data for each sensor is maintained in the accelerometer. All digital data output is fully calibrated and easily converted to user specified engineering units.

Self-Test

Self-test commands help verify channel integrity and wiring connections.

Small Size

Complete conditioned uniaxial, biaxial and triaxial accelerometers with digital signal processing in just two cubic inches.

Built--In Power Supply Regulation

Continuous unregulated DC power from +8.5 to +36 volts is all that is required to measure accelerations on all axes. Reverse power voltages of up to -80 V can be withstood indefinitely. Transients of +80 V for 550 ms compatible with MIL-STD-704A can be withstood with full operation.

Easy Installation with Minimal Wiring Requirements

A built-in terminal block or cable with 9-pin connector simplifies wiring. Wiring can be minimized by daisy-chaining the two multidrop RS-485 pins on up to 30 digital accelerometers. Tapped holes on bottom and back simplify horizontal or vertical mounting.

Suitable for Harsh Environments

These accelerometers are robust and can be used in harsh environments, surviving 1500 g powered or unpowered. A DO-160 version is available.

Warranty

Measurement Specialties' digital accelerometers come with a three-year factory warranty.

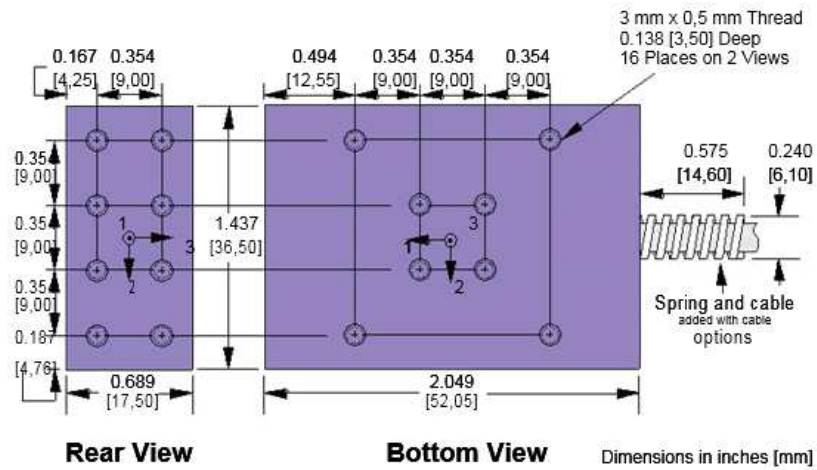

SPECIFICATIONS FOR 15200B, 25200B AND 35200B - improved specifications available upon request

Ta = Tmin to Tmax; Acceleration = 0 g unless otherwise noted; within one year of calibration.

Parameter	Min	Typical	Max	Units	Conditions/Notes
Accelerometers Full Scale Range					Lower ranges are user configurable
Option R070			±70	g	
Option R050			±50	g	
Option R035			±35	g	
Sensitivity Drift 25°C to Tmin or Tmax		±0.5		%	Percent of sensitivity at 25°C
Zero g Drift 25°C to Tmin or Tmax		±1		g	
Alignment		±3.0		degrees	Deviation from ideal axes
Transverse Sensitivity		0.25		%	Inherent sensor error, excluding misalignment
Nonlinearity		0.2	2	% FSR	Best fit straight line
Frequency Response	0		400	Hz	†Lower filter cutoffs are user configurable
Noise Density					10 Hz to 400 Hz
Option R070		1.8	3.5	mg/√Hz	
Option R050		1.4	3	mg/√Hz	
Option R035		1.1	3	mg/√Hz	
Temperature Sensor					
Range	-55		125	°C	
Resolution		0.25		°C	
Accuracy		±2	±3	°C	Ta = -40 to +85°C
Digital Signal Processor					
Sensor Scan Rate			42,500	Hz	User configurable, channels processed in parallel
Analog Outputs					Configurable to sensor
Voltage Swing	0.50		4.50	V	Iout = 1 mA max
Impedance to Analog-	100	130	220	Ω	
Nonlinearity			0.15	% FSR	Excluding sensor nonlinearity
Digital Output Word Size			16	bits	Filtered, gained and calibration corrected
Power Supply (Vs)					
Input Voltage Limits	-80		+80	V	-80 V continuous, >38 V if ≤550 ms, duty <1%
Input Voltage - Operating	+8.5		+36	V	
Input Current		55		mA	
Rejection Ratio		>120		dB	DC
Temperature Range (Ta)	-40		+85	°C	Terminal block Option T000 rated to -30°C
Mass		78		grams	
Shock Survival					
Sensor	-1500		+1500	g	Any axis for 0.5 ms, limited by oscillator

† User configurable low-pass filter 3dB cutoff (number poles configurable)
