

# **BUS INSULATOR ANIMAL GUARD (BISG-60)** WILDLIFE AND ASSET PROTECTION PRODUCTS

## **KEY FEATURES**

- Easy to install on bus and switch insulators
- Bolted design for excellent mechanical hold and wind resistance
- Excellent insulator or prevention against phaseto-ground flashovers
- Fits insulation core diameters ranging from 1" (25 mm) through 4.5" (115 mm)
- Rugged, non-tracking, UV-resistant polymer

TE Connectivity's (TE) Raychem BISG improved isolation guard prevents animal-caused outages in electrical substation equipment.

BISG discs have been successfully eliminating outages from squirrels, raccoons, opossums, cats, and other animals in substations for years. The BISG guard has been designed to provide the same great protection with added features. Its "invisible" design allows easier visibility of switch blades and other equipment components through the guard. This new design allows for easy field modifications and can be reduced by trimming along the grill ribs for tight phase-to-phase insulator applications.

The BISG guard allows easier hot-stick installation by incorporating a threaded area in the guard. The integrated threads eliminate the need to hold a nut while installing the bolt assembly with a hot-stick. The bolted design positively and tightly secures the device onto the insulator or bushing, preventing loosening or drooping caused by wind, snow, ice, or animals.

Customers can count on consistent, high quality products, driven by TE's proven innovation and backed by our extraordinary customer support.

TE's Wildlife and Asset Protection products and systems of tubes, tapes, sheets, pre-formed covers and barriers provide a proven, cost-effective and easy-to-install solution to bird, animal and weather related outages.

PRODUCT PERFORMANCE							
TEST	Power Arc Test Current Ice Flashover/Contamination Impulse/ BIL AC Dry Withstand on Disconnecting Switch Wind Tunnel	<ul> <li>14.4 kV RMS, No evidence of burns or flames</li> <li>10 kA RMS 10 cycles</li> <li>Insulator with BISG guard must demonstrate a flashover value within 90% of control</li> <li>Does not significantly alter electrical characteristic of insulator</li> <li>15 kV minimum</li> <li>70 MPH for 10 min., No dislodging of BISG guard from insulator location</li> </ul>
