XFTC310

Miniature Load Cell

SPECIFICATIONS

- Range from 0-2N to 0-2KN
[0.45 lbf to 450 lbf]
- Tension and Compression
- High Overload Capacity

The **XFTC310** series has been specifically developed to measure tension and compression in static and dynamic applications. The miniature size and lightweight facilitate testing where these conditions are necessary.

The sensing element is fitted with a fully temperature compensated Wheatstone bridge equipped with high stability micro-machined silicon strain gages. The use of silicon strain gages optimises the load cell's performance at low ranges and frequencies.

TE CONNECTIVITY designed other mechanical interfaces such as standard as **XFTC300** with two male threads and **XFTC320** with two female threads.

On request, Instruction documents can be provided to ease the selection and use of our sensors and provide helpful tips.
