APPENDIX 6 : LOCKED BOX TENSILE STRENGTH

APPENDIX 7 : CONTACT RESISTANCE

Contact resistance measurement point for busbar:

Contact resistance measurement for fuses and relays:

The method is similar for fuses wired on both tabs and fuses wired on one side and connected to the busbar on the other side.

The wire length is 100mm. depending on the configuration (wire or busbar).

The resistance of :

 The fuse or the relay,

 The one or two wires,

are removed from the resistance measurement.

The criterion of acceptance is the sum of both connexions on the both fuse tabs.

APPENDIX 8 : VIBRATION PROFIL
