		Product Specification
113		1-Position, Positive Lock Connector
108-5113	1.	Scope:
Ă		This specification covers general requirements for product performance and
a u		test methods of 1-position, positive lock connector.
NUMBER		
<u>.</u>	2.	Product Part Numbers and Nomenclature:
		This product line consists of the following members of terminating components.
de r 3e		Part Numbers Product Descriptions
Customer Release		170234-1Positive Lock Receptacle Contact170234-2
		170233-1 Positive Lock Receptacle Contact 170233-2
AMP SECURATY CLASSIFICATION		1-Position, Positive Lock Housing
SEC(
AMP CLA	3.	Definition of Terms:
		The terms used in this specification shall be defined as follows.
	3.1	Contact: A contact is an electrically conductive member of component used in a connector assembly.
	3.2	Housing: A housing is an electrically insulating member of component used in a connector assembly.
	3.3	Connector: A connector is an assembly of a housing and contacts, properly arranged to fit for terminating functions. Usually, contact positions are fully filled with wire-crimped contacts.
	4.	Materials and Finish:
	4.1	Contact: Contacts are made of brass conforming to Alloy No. 260 of ASTM B36. Either plain or post tinned products are available, depending upon the part type used.
	4.2	Housing: Housings are made of molded 6/6 NYLON resin.

AMP J-522

5. Product Contruction, Feature and Dimensions:

5.1 Receptacle Contacts:

Product contruction, feature and dimensions shall be conforming to the applicable customer product drawing(s). Receptacle contacts shall have proper construction to fit for wire termination encapsulated in housing after wire crimping, and secured in the cavity by means of locking device and fuction as a female contact. When mated with conterpart tab contact, locking detent on the contact hooks up to assure stable connection. To release locking, pulling to separate the connector halves will suffice the action. Locking detent acts in effect when the contacts are pulled by lead wires at crimped barrels.

5.2 Housing:

108-5113

NUMBER

Customer Release

AMP_SECURITY CLASSIFICATION Product construction, feature and dimensions shall be conforming to the applicable customer product drawing(s). The detent lock device provided on the bottom of housing cavities catches in the contact slot to retain the contact in position. When to remove the contact from housing cavity, apply force to bend the bottom of housing so that the detent is unlocked and contact can be removed by pulling it by hand.

6. Rating:

6.1 Temperature Rating:

Temperature rating of the product shall be within -40 thru + $105^{\circ}C$, including ambient temperature and temperature rising by the effect of energized electric load.

6.2 Applicable Wires to Be Used:

To this product application, the wires conforming to JIS C 3406, Low-Voltage Cables for Automobile, of the specified sizes must be used.

Wire Size Nos.		154718-1 170233-1	170234-1
Wire Size mm ² Conductor(AWG)	_	0.5 - 2.0 (#20 - #14)	3.0 - 5.0 (#12 - #10)
Insulation Diameter	<u> </u>	2.2 - 3.1	3.8 - 4.9

7. Performance Characteristics and Test Methods:

7.1 Performance:

When tested in accordance with the test method specified in Para. 7.2, in the sequence specified in Para. 7.3, the products shall be conforming to the requirements specified in Table 1.

7.2 Test Methods:

7.2.1 Appearance:

NUMBER

SECURITY

ЧМР

Inspect the product visually and tactually for conformance of product drawing(s), and check for presence of abnormalities such as cracks, breakage, damages, rattling and loose of parts, rust, voids, fusion and deformation that are detrimental to connector functions.

7.2.2 Connector Insertion Force:

Fasten one of a mating pair of connectors on the head of tensile testing machine and apply an axial load to insert the counterpart connector assembly by operating the head to travel with the speed at a rate of 100mm a minute.

the head to travel with the travel with trave

Fasten one of the mated pair of connectors on the head of tensile testing machine and apply an axial pull off load to unmate the connector halves by operating the head to travel with the speed at a rate of 100mm a minutes. The force required to unmate the connectors without locking devices set in effect shall be measured and recorded.

7.2.4 Termination Resistance:

Termination resistance is obtained by measurement of millivolt drop between the probing points across wire termination by applying test current of 1 A at open circuit voltage of 12V DC. Measurement shall be done after temperature rising of circuit becomes stabilized by probing at the point 75mm apart from the wire termination in the circuit. (Across Y and Y' in Fig. 1) Termination resistance shall be calculated from the millivolt drop reading, after deducting the wire resistance of a 75mm long crimped wire.

Fig. 1

7.2.5 Handling Touch of Contact at Insertion and Extraction:

Manually repeat insertion and extraction of contacts in the manner as performed in production assembly work, and tactually confirm that no abnormal touch is felt that causes excessive fatigue or physical pains at assembly.

7.2.6 Insulation Resistance:

108-5113

NUMBER

Cus tomer Release

> AMP_SECURITY CLASSIFICATION

Mated pair of connector assemblies shall be tested by applying test potential between the contacts and the ground after the connectors are wrapped with metallic foil as shown in Fig. 2. Petential intensity shall be 500V DC.

Fig. 2

7.2.7 Dielectric Strength:

Mated pair of connector assemblies shall be tested by applying test potential of 1,800V AC of commercial frequencies for 1 minute between the contacts and the ground.

7.2.8 Contact Retention Force:

An approximately 100 mm long, 0.85mm² wire crimped contact shall be loaded in connector cavity position and secured by setting locking device in effect. The connector assembly shall be fastened on the tensile testing machine, and apply an axial pull-off load to the crimped wire end by operating the head to travel with the speed at a rate of 100mm a minute uniformly. Contact retention force is determined when the contact is dislodged from the loaded position.

7.2.9 Contact Locking Retention Force:

Have a pair of connector housings filled with contacts that are crimped with approximately 100 long 0.85mm² or greater size wire, and mate them with locking device set in effect. Fasten tab contact side of the connectors onto the head of tensile testing machine, and apply an axial pull-off load to the counterpart connector to unmate by operating the head to travel with the speed at a rate of 100mm a minute uniformly. Contact locking retention force is determined when the connector halves are separated by disengagement or breakage of contact locking device.

CLASSIFICATION

SECURITY

AMP

Fasten an approximately 100mm long wire crimped contact onto the head of tensile testing machine, and apply an axial pull-off load to the wire by operating the head to travel with the speed at a rate of 100mm a minute. Crimp tensile strength is determined when the wire is broken or is pulled out of the wire crimp.

7.2.11 Vibration, High Frequency:

7.2.12 Vibration Low Frequency:

Mated pair of connector assemblies shall be fastened on the vibration testing table with all the contact cavities filled with wire-crimped contacts which are series-wired and energized with the test current of 3A at open circuit voltage of 12V DC as shown in Fig. 3. The testing table shall be vibrated with accelerated velocity of $44m/s^2(4.5G)$ in reciprocating sweeping frequencies to travel from 20 to 200Hz. at a rate of one cycle a minute. Vibration shall be applied in three axial directions of connector assemblies for 8 hours each direction. While testing the test circuit shall be monitored by appropriate measuring appratus for the los of electrical continuity greater than 1 µsecond. The sensitivity of loss detector shall be provided to detect millivolt drop of 1V/A in the circuit.

Fig 3

Contact-loaded and mated pair of connector assemblies shall be tested by using vibration testing machine conforming to SAE J577 after mounting the connectors with all the contacts series-wired as shown in Fig. 3. Vibration shall be such that shaken by rotating cam drop to vibrate 3.2mm in 12.5Hz given to the vibration testing plate whose free end is supported by spring tension of 265-314 N (27-32 kgf) in "X" and "Y" directions as indicated in Fig. 3 for 1 hour each direction respectively. While vibrating, the circuit is energized with closed circuit test current of 1A at open circuit voltage of 12V, and monitored for the loss of electrical continuity greater than 1 μ second taking place in the circuit. Discontinuity indication level shall be adjusted to sense millivolt drop of 1V/A in the circuit.

Customer Release

AMP SECURITY CLASSIFICATION Mated pair of connector assemblies shall be exposed under 5 cycles of test temperature variation as specified in Table 2 below. After completion of test duration, the sample connectors shall be removed from the oven and reconditioned in the room temperature before performing the further tests as specified.

Test Sequence	Test Conditions	Duration
1	Exposed under elevated temperature at 105 ±5°C	30 minutes
2	Reconditioned in the room tempera- ture	5 minutes max.
3	Exposed under cold temperature at $-40 \pm 5^{\circ}$ C	30 minutes
4	Reconditioned in the room temperature	5 minutes max.
One rotati	on of the sequence makes 1 cycle.	

Table 2

7.2.14 Salt Spray:

Mated pair of connector assemblies shall be tested in accordance with JIS-C-5028 for 2 cycles of 1 hour exposure with 1 hour off load interval taken between the cycles. After completion of test duration, sample connector shall be removed from the test chamber, and linsed in the tap water and dried in the room temper-ature for 1 hour, before performing the further tests as specified.

7.3 Test Sequence:

All the tests shall be conducted in accordance with the test sequence as specified in Table 3.

外観を目視および触覚により観察し,有害な亀裂,割損,破損,がた,部品のは ずれ,錆,溶解,および変形等の有無を確認する。

7.2.2 コネクタ挿入力

コンタクトまたはコネクタの一方を固定し,他方を軸方向に毎分約100mmの一定 速度で操作する。

7.2.3 コネクタ引抜力

コンタクトまたはコネクタの一方を固定し,他方を軸方向に毎分約100 mmの一定 速度で操作する。なお、コンタクトのロック機構は作用させないで行なう。

AMP J-002-1

- 7.2.7 耐電圧 コネクタを嵌合した状態で才2図の如くコンタクト対アース間に商用周波数の AC 1,800 Vを1分間印加する。
- 7.2.8 コンタクト保持力
 ハウジングに約100 mmの長さ、0.85 mill
 トが組込まれたコネクタを固定し、電線を軸方向へ毎分約100 mmの一定速度で
 引張り、コンタクトがハウジングから抜けた時の荷重を測定する。
- 7.2.9 コンタクトロック強度 ハウジングに約100 mmの長さ、0.85 mが以上の断面積の電線を圧着したコンタクトが組込まれたコネクタを嵌合し、ロック機構の作用した状態でタブ側を固定し、 電線を軸方向に毎分約100 mmの一定速度で引張り、ロック機構の外れ又は破損して嵌合の外れた時の荷重を測定する。
- 7.2.10 圧着部引張強度 約100mmの長さの電線を圧着したコンタクトを固定し、電線を軸方向に毎分約 100mmの一定速度で引張り、電線の破断または圧着部から電線の引抜けた時の 荷重を測定する。
- 7.2.11 高周波振動

 コネクタを嵌合,全極直列に接続し,開放電圧DC 12V,短絡電流1Aを通電 44m/s²
 した状態で才3図の如く振動試験機に取付ける。振動加速度は(4.5G)振動周波
 数は20~200Hzを往復1分間でスイープさせる。これをX,Y方向各8時間 行ない,1μ sec.以上の瞬断の有無を観察する。瞬断の検知レベルは1V/A の電圧降下に設定。

Y方向(試料の軸方向)

A4. -> > 2000 48.2 (2)

7.2.12 耐衝撃性

コネクタを嵌合,全極直列に接続し,開放電圧DC 12V,短絡電流1Aを通電した状態で才3図の如くSAE J 577 による試験装置に取付け,振動数 12.5 Hz, カム落下 3.2 mm,衝撃台の端でのスプリング張力(265-3.14N (27-32kgf)でX,Y方向各1時間行ない,1 μ sec 以上の瞬断の有無を確認する。瞬断の検知レベルは1V/Aの電圧降下に設定。

7.2.13 熱衝撃

コネクタを嵌合した状態で分2表に示す試験を1サイクルとして、これを5サイクル 行なった後、室温に戻る迄放置する。

試験順序	試 験 方 法
1	105±5°C 05時間
2	室温 5 分以内
3	-40± 5°C 0.5時間
4	室温 5 分以内

才 2 表

7.2.14 塩水噴霧

コネクタを嵌合した状態でJIS-C-5028 に基づいて24時間噴霧,1時間休止, 24時間噴霧後,水洗し室温にて1時間乾燥する。

7.3 試験順序

試験順序は才3表に示すグループ毎の順序に従って行なうものとする。

管理基準 一般顧客用

AMP J-002-1

8. 品質保証条件

8.1 試驗条件

特に指定のない場合は下記に示す環境条件のもとで性能試験を行なうものとする。

温	度	1 5 ∼ 3 5 °C
相対	湿度	45~75%
	Æ	86.7 - 107kPa (650 - <u>800</u> mmHg)

8.2 試 験

8.2.1 試料

性能試験に用いる試料は第5表に示す電線に「ボジ ティブロック・リセブタクル(国産品) 取付適用規格114-5032」又は「ボジティブロック・リセブタクル圧着仕様書114-5029」に基つ"いて圧着した正規の試料であること。 但し、評価に使用する試料は、全て ベンドアップダウン、ツイスト、ローリングは、±5°以内とする。 いずれの試料も規定され た順序以外の他の試験に用いてはならない。

8.2.2 試料数

性能試験に用いる試料数は各グループ毎に10セット以上とする。

8.2.3 相手タブ

性能試験に使用する相手タブは才4図に示す寸法のものを使用するものとする。 但し -2(錫めっき付)リセブタクルの性能試験には 錫めっき済黄銅製材料を使用すること。

8.2.4 使用電線

性能試験に用いる電線はオ4表に示す電線にて行なうものとする。

電線サ	ーイズ	素線	構成	断面積	
呼び (mm)	AWG	素線径(mm)	素線数	mm	СМА
0.5	# 2.0	0.32	7	0.5 1	1111
0.85	#18	0.32	11	0.88	1746
1.25	#16	0.32	16	1.28	2540
2	#14	0.3 2	26	2.09	4128
3	#12	0.32	4 1	3.30	6509
5	#10	0.32	65	5.23	10319

才 4 表

9. 取扱い上の注意事項

9.1 圧着及び取扱い

ハウジングとコンタクトの保持性能及びコネクタの接触性能を維持するため、コンタ クトの圧着は「ボジティブロック・リセブタクル(国産品)取付適用規格114-5032」又 は「ボジティブ・ロック・リセプタクル圧着仕様書114-5029の規定に基づいて作業を行 なうこと。
