## ELCON Mini cable-to-board power connector system, Four Position

## 1. INTRODUCTION

### 1.1 Purpose

Testing was performed on the ELCON Mini four position cable-to-board connector system, using connectors with the optional shield, and cable connectors with the optional shield to determine its conformance to requirements of Design Objectives 108-19429, Revision B.

### 1.2 Scope

This report covers the electrical, mechanical, and environmental performance of the cable connector plug (part number 2173168-1, 2173200-1) and board connector (part number 2173211-1, 2173132-1). Testing was performed at the Engineering Assurance Product Testing Laboratory.
1.3. Conclusion

The cable connector plug (part number 2173168-1, 2173200-1) and board connector (part number 2173211-1, 2173132-1) conformed to the electrical, mechanical, and environmental performance requirements of Design Objectives 108-19429, Revision B.
1.4. Environmental Conditions

Unless otherwise stated. The following environmental conditions prevailed during testing
Temperature: 15 to $35^{\circ} \mathrm{C}$
Relative Humidity: 25 to $75 \%$

## 2. PRODUCT QUALIFICATION AND REQUALIFICATION TEST SEQUENCE

### 2.1 Sample Description

The tests were executed on 25 pieces of the board-connector, P/N 2173211-1, 2173132-1 with 20 counter-part cable-connector plug P/N 2173168-1, 2173200-1. All test-groups consist of 5 connector pairs.

### 2.2 Test Procedures

IEC 60512-1-1:
Test 1a

IEC 60512-2-1:
Test 2a

IEC 512-2-4a:

## Visual examination:

The test samples were visually inspected under a stereomicroscope, at a 10x magnification, with suitable illumination.

## Termination resistance:

The termination resistance was measured with an open circuit voltage of 20 mVolt and a maximum current of 100 mA DC.

Voltage proof: (Unmated)
This measurement was done with a high voltage tester. The test duration was one minute at 1120 V rms.

IEC 60512-3-1:
Test 3a

IEC 60512-5-1:
Test 5a

IEC 60512-9-2:
Test 9b

IEC 60512-5-2:
Test 5b

IEC 60512-13-2:
Test 13b

## Insulation resistance: (Unmated)

This measurement was done with a programmable electrometer. The measuring voltage was 100 Volt during one minute.

## Temperature rise:

Two diagonal oriented contacts were charged with a test current of successively 22, 25 and 30A. This current was maintained for a stabilization period of 1 hour minimum. The temperature measurements were, inside the connector, done by means of a thermocouple.

## Electrical load and temperature:

With this current, the samples were subjected to a temperature of $85^{\circ} \mathrm{C}$ during 500 hrs .

## Current-temperature derating curve:

The test samples were charged with a test current of successively 22, 25 and 30A . This current was maintained for a stabilization period of 1 hour. After stabilization, the temperature was measured. Then the current through all contacts was increased in steps of 1A, and every time after stabilization the temperature was measured until a $\Delta \mathrm{t}$ of 30 K was reached.

## Shield contact spring force:

At a deflection of 0.26 mm , the contact force of the shield contacts was measured.

## Mating / unmating forces:

The test samples were mounted on a push-pull tester.
During a mechanical operation, at a rate of 10 mm per minute, the mating and unmating forces were measured.

## Polarization method:

In all wrong mating manners, a force of 250 N was applied to the connector for 10 seconds. This should not lead to any damages.

## Latch activation force:

The force to activate the latch was measured.

## Mechanical operation (enduration):

The samples were mated and unmated for 50 times at a rate of 500 cycles per hour.

## Contact retention in insert:

The contact retention force per contact was measured on a push-pull tester, with a force of max. 50 N .

## Side load, 4 directions:

A force of 40 N was applied to the samples. This force was maintained during 10 seconds.

## Locking latch strengths:

A force of 100 N was applied on the cable connector in unmating direction, with the locking feature latched.

## Board connector mounting force:

The force to mount the board connector was measured.

IEC 60512-17-3

IEC 60512-6-4:
Test 6d

IEC 60512-6-3:
Test 6c

IEC 60512-11-4:
Test 11e

IEC 60512-11-1:

IEC 60512-11-3:
Test 11 c

## Straight cable pull:

The straight cable pull force was measured on a tensile tester. An axial load of 80 N was applied on the cable of the cable connector during 10 seconds.

## Vibration:

The samples were mounted on a vibration table.
The frequency from $10-500-10 \mathrm{~Hz}$ was traversed with one octave per minute.
Below the cross-over frequency the samples were vibrated with an amplitude of 0.75 mm , above that frequency with an acceleration of 10 g . The duration was 60 minutes in each of the three mutually perpendicular directions. The samples were provided with a circuit to detect interruptions of continuity longer than 1 micro-second.

## Shock test:

Acceleration 50 g , half sine wave pulses of 11 msec .
6 shocks in each of three mutually perpendicular directions were executed.
The samples were provided with a circuit to detect interruptions of continuity longer than 1 micro-second.

## Rapid change of temperature:

The samples were subjected to a rapid change of temperature test with the following parameters:
One cycle consists of:
Upper temperature $\quad: 90^{\circ} \mathrm{C}$ for 30 minutes.
Lower temperature : $-40^{\circ} \mathrm{C}$ for 30 minutes.
Condition : mated.
Number of cycles :5

## Climatic sequence:

The samples were subjected to the following tests:
Dry heat $\quad: 90 \rightarrow C, 16$ hours.
Damp heat cyclic: $25 \rightarrow$ C/ $55 \rightarrow$ C, RH $93 \%$, 24 hours, 1 cycle.
Cold $\quad:-40 \rightarrow$ C, 2 hours.
Damp heat cyclic: 25-C/ 55-C, RH 93\%, 24 hours, 5 cycles.
Condition : mated.

## Damp heat, steady state:

The samples were subjected to a damp heat steady state test under the following conditions:
Temperature $: 40^{\circ} \mathrm{C}$.
Rel. humidity : $95 \%$.
Condition : mated.
Duration : 21 days.
TEC-109-201:
Method C

## Resistance to soldering heat:

Samples were subjected to an IR reflow soldering curve, under the following conditions:

- Average ramp rate: $3^{\circ} \mathrm{C}$ per second maximum
- Preheat temperature (minimum): $150^{\circ} \mathrm{C}$
- Preheat temperature (maximum): $200^{\circ} \mathrm{C}$
- Preheat time: 60 to 180 seconds
- Ramp to peak: $3^{\circ} \mathrm{C}$ per second maximum
- Time over liquidus ( $217^{\circ} \mathrm{C}$ ): 60 to 150 seconds
- Peak temperature: $260+0^{\circ}-5^{\circ} \mathrm{C}$
- Time within $5^{\circ} \mathrm{C}$ of peak: 20 to 40 seconds
- Ramp - cool down: $6^{\circ} \mathrm{C}$ per second maximum
- Time $25^{\circ} \mathrm{C}$ to peak: 8 minutes maximum

### 2.2 Test Sequence

## Test-group 1:

- Visual examination
- Termination resistance
- Temperature rise
- Termination resistance
- Electrical load and temperature
- Termination resistance
- Temperature rise
- Termination resistance
- $\quad$ Side-load in 4 directions
- Visual examination
- Locking latch strength
- Visual examination
- $\quad$ Cable pull force out crimp ferrule
- Visual examination
- Insertion force during wrong polarization
- Visual examination
- $\quad$ Contact-retention (cable-connector)
- Visual examination
- Termination resistance
- Visual examination

## Test-group 3:

$\begin{array}{ll}- & \text { Visual examination } \\ - & \text { Termination resistance }\end{array}$

- $\quad$ Rapid change of temperature
- Termination resistance
- Vibration sinusoidal
- Physical shock
- Termination resistance
- Visual examination

## Test-group 2:

- Visual examination
- Shield contact spring force
- Insertion/withdrawal force (no latch)
- Termination resistance
- Mechanical operation
- Termination resistance
- $\quad$ Shield contact spring force
- Insertion/withdrawal force (no latch)
- Termination resistance
- Insertion/withdrawal force (no latch)
- $\quad$ Shield contact spring force
- Termination resistance
- Visual examination

## Test-group 4:

- Visual examination
- Termination resistance
- Insulation resistance
- Voltage proof
- Climate sequence
- Termination resistance
- Insulation resistance
- Voltage proof
- Damp/heat steady-state
- Termination resistance
- Insulation resistance
- Voltage proof
- Visual examination

## Test-group 5:

- Visual examination
- Mounting-force board-connector
- $\quad$ Resistance to soldering heat (Board-connector)
- Visual examination

### 2.3 Equipment Used

| Equipment | Producer | Type | Series Nb | Cal. Due |
| :--- | :--- | :--- | :--- | :--- |
| Micro-ohmmeter | Hioki | 3560 | 110202069 | Mar-14. |
| Electrometer | Keithley | 6517 A | 1068400 | Mar-14. |
| High voltage tester | Sefelec | DXS506 | 1109582 | Dec-13. |
| MultiMeter/DAS 2 | Keithley | 2700 | 1315592 | Mar-14. |
| Switching Module 2 | Keithley | 7708 | 1306206 | Mar-14. |
| Oven | Binder | FED 53-E2 | $12-05379$ | Mar-14. |
| Tensile tester | MTS | $400 M$ | $165811-20$ | Oct-14. |
| Load cell | MTS | 500 N | 2239 | Oct-14. |
| Vibration control | DataPhysics | 3788 |  |  |
| Vibrator | Ling+B\&K | PA2000 | S1165-002 |  |
| Accero meter | MMF | ks 94-01 | 723 | Apr-14. |
| Climatic chamber | Weiss | $80-200 D U-S T$ | $224 / 17413$ | Jan-14. |
| Climatic chamber | CTS | C-65/100 | 087130 | Jan-14. |
| Climatic chamber | CTS | CTSMT | EasyFlow | $6 / 30$ |
| Hot air reflow oven | AllSMT |  |  | Jan-14 |

### 2.4 Results:

## Test-group 1:

Low level contact resistance power contacts: the measured values after any of the executed tests do not exceed the requirement of $3 \mathrm{~m} \Omega$ max. The highest measured value was $1.38 \mathrm{~m} \Omega$.

Low level contact resistance shield contacts: the measured values after any of the executed tests do not exceed the requirement of $10 \mathrm{~m} \Omega$ max initially and $20 \mathrm{~m} \Omega$ max finally. The highest measured value was 2.64 $\mathrm{m} \Omega$.

Latch activation force: see the table below.

| All values represented in Newton. |  |  |  |
| :---: | :---: | :---: | :---: |
| Product name: | 4 pos shielded power |  |  |
| Column | Group | Lot | Displacement (mm) |
| $\mathbf{- 1}:$ | 1 |  | $1-5$ |
| Sample | $\mathbf{- 1}$ |  |  |
| $\mathbf{1}$ | 15.60 |  |  |
| $\mathbf{2}$ | 21.10 |  |  |
| $\mathbf{3}$ | 17.56 |  |  |
| $\mathbf{4}$ | 17.41 |  |  |
| $\mathbf{5}$ | 13.69 |  |  |
| Max. | $\mathbf{2 1 . 1 0}$ |  |  |
| Min. | $\mathbf{1 3 . 6 9}$ |  |  |
| Mean. | $\mathbf{1 7 . 0 7}$ |  |  |

Temperature rise: at the max current load (22,25 and 30A) the temp rise is within the requirement of $\Delta t$ max $\leq 30^{\circ} \mathrm{C}$.
-Derating curve:

Connector with 14AWG cable (with shield)

Connector with 12AWG cable (without shield)

Connector with 10AWG cable (without shield)

- Side load in 4 directions,
- Locking latch strength,
- Cable pull force out crimp ferrule,
- Insertion force during wrong polarization,
- Contact-retention (cable-connector):
after subjection to these impacts, no aspects that can be detrimental for normal functionality of the products have been determined.

## Test-group 2:

Low level contact resistance power contacts: the measured values after any of the executed tests do not exceed the requirement of $3 \mathrm{~m} \Omega$ max. The highest measured value was $0.98 \mathrm{~m} \Omega$.

Low level contact resistance shield contacts: the measured values after any of the executed tests do not exceed the requirement of $10 \mathrm{~m} \Omega$ max initially and $20 \mathrm{~m} \Omega$ max finally. The highest measured value was 2.53 $\mathrm{m} \Omega$.

Shield contact spring force measurements:
Note: 'after M.O': after mechanical operation.

## Test-group 3:

Low level contact resistance power contacts: the measured values after any of the executed tests do not exceed the requirement of $3 \mathrm{~m} \Omega$ max. The highest measured value was $0.98 \mathrm{~m} \Omega$.

Low level contact resistance shield contacts: the measured values after any of the executed tests do not exceed the requirement of $10 \mathrm{~m} \Omega$ max initially and $20 \mathrm{~m} \Omega$ max finally. The highest measured value was 3.67 $\mathrm{m} \Omega$.

Vibration and mechanical shock: no interruptions of continuity with a duration of $>1 \mu \mathrm{sec}$ have been detected.

## Test-group 4:

Low level contact resistance power contacts: the measured values after any of the executed tests do not exceed the requirement of $3 \mathrm{~m} \Omega$ max. The highest measured value was $1.77 \mathrm{~m} \Omega$.

Low level contact resistance shield contacts: the measured values after any of the executed tests do not exceed the requirement of $10 \mathrm{~m} \Omega$ max initially and $20 \mathrm{~m} \Omega$ max finally. The highest measured value was 2.18 $\mathrm{m} \Omega$.
