

**RK 6747 Revision 6**

## **GPO-135 SLEEVING**

### **SCOPE**

**This Quality Assurance Specification establishes the quality standard for a types of heat-shrinkable, electrically-insulating, semi-flexible, polyolefin sleeving.**

### **Approved Signatories**

This document is electronically reviewed and approved - therefore no signatures will appear.

## 1. REVISION HISTORY

| Revision Number | Change Request               | Date                   | Incorporated By         |

## 2. REQUIREMENTS

## 2.1 Composition, Appearance and Colour

The sleeving shall be homogeneous and free from pinholes, bubbles, cracks and inclusions.  
Colour shall be as specified in the contract or order.

## 2.2 Dimensions

| Size       | Inside Diameter as supplied (min)<br>mm | Inside Diameter after recovery (max)<br>mm | Wall Thickness after recovery<br>mm |
|------------|-----------------------------------------|--------------------------------------------|-------------------------------------|
| 1.2/0.6    | 1.2                                     | 0.6                                        | 0.45 ± 0.10                         |
| 1.6/0.8    | 1.6                                     | 0.8                                        | 0.45 ± 0.10                         |
| 2.4/1.2    | 2.4                                     | 1.2                                        | 0.50 ± 0.10                         |
| 3.2/1.6    | 3.2                                     | 1.6                                        | 0.50 ± 0.10                         |
| 4.8/2.4    | 4.8                                     | 2.4                                        | 0.50 ± 0.10                         |
| 6.4/3.2    | 6.4                                     | 3.2                                        | 0.65 ± 0.15                         |
| 9.5/4.8    | 9.5                                     | 4.8                                        | 0.65 ± 0.15                         |
| 12.7/6.4   | 12.7                                    | 6.4                                        | 0.65 ± 0.15                         |
| 19.0/9.5   | 19.0                                    | 9.5                                        | 0.75 ± 0.15                         |
| 25.4/12.7  | 25.4                                    | 12.7                                       | 0.90 ± 0.15                         |
| 32.0/16.0  | 32.0                                    | 16.0                                       | 0.95 ± 0.20                         |
| 38.0/19    | 38.0                                    | 19.0                                       | 1.00 ± 0.20                         |
| 51.0/25.4  | 51.0                                    | 25.4                                       | 1.15 ± 0.25                         |
| 76.0/38.0  | 76.0                                    | 38.0                                       | 1.25 ± 0.25                         |
| 102.0/51.0 | 102.0                                   | 51.0                                       | 1.40 ± 0.25                         |

Sleeving of special expanded or recovered dimensions may be supplied as specified in the contract or order.

## 2.3 Test Requirements

The test requirements shall be as specified in Table 1.

### **3. TEST METHODS**

#### **3.1 Preparation of Test Specimens**

Unless otherwise specified, tests shall be carried out on specimens of sleeving recovered by conditioning in a fan assisted air circulating oven at  $200 \pm 5^\circ\text{C}$  for  $4 \pm 1$  minutes and allowed to cool in air to ambient temperature. No pre-conditioning period is required prior to testing. Unless otherwise specified, all tests shall be made under standard ambient conditions according to IEC Publication 212. In cases of dispute the tests shall be carried out at a temperature of  $23 \pm 2^\circ\text{C}$  and at  $50 \pm 5\%$  relative humidity.

---

#### **3.2 Dimensions and Longitudinal Change**

The test method shall be as specified in ASTM D2671. The length and inside diameter of three 150mm long specimens of expanded sleeving shall be measured. The specimens shall be recovered in a fan assisted air circulating oven and the length and inside diameter of each shall be measured. The longitudinal change shall be expressed as a percentage of the original length. The minimum and maximum recovered wall thickness shall be determined.

---

#### **3.3 Tensile Strength and Ultimate Elongation**

The test method shall be as specified in ISO 37. For sleeving of recovered bore greater than 6mm, five Type 2 dumb-bell specimens shall be tested. For sleeving of recovered bore less than or equal to 6mm, five tubular specimens 125mm long shall be tested. Initial jaw separation shall be 50 mm and rate of jaw separation shall be  $100 \pm 10\text{mm}$  per minute. The test shall be carried out at a temperature of  $23 \pm 2^\circ\text{C}$ .

---

#### **3.4 Specific Gravity**

The test method shall be as specified in Method A of ISO 1183.

---

#### **3.5 Heat Shock**

The test method shall be as specified in ASTM D2671. For sleeving of recovered bore 6mm or less, apply the test to cut lengths of that sleeving. For sleeving of recovered bore greater than 6mm, apply the test to strips 6mm wide, cut from the recovered sleeving, with their lengths parallel to the extruded axis. Mandrel diameter shall be  $10 \times$  specimen thickness  $\pm 10\%$ . For tubular specimens the thickness is the outside diameter. The specimens shall be conditioned as specified in Table 1.

---

#### **3.6 Heat Ageing**

The test method shall be as specified in ISO 188. Five tensile test specimens prepared as in Clause 3.3 shall be conditioned in a fan assisted air circulating oven as specified in Table 1. After conditioning the specimens shall be removed from the oven, allowed to cool naturally to room temperature and tested for Ultimate Elongation according to clause 3.3.

**TEST METHODS (Cont'd)****3.7 Low Temperature Flexibility**

The test method shall be as specified in Procedure C of ASTM D2671.

For sleeving of recovered bore 6mm or less, apply the test to whole sections of recovered sleeving. For sleeving of recovered bore greater than 6mm, apply the test to strips 6mm wide, cut from the recovered sleeving, with their lengths parallel to the extruded axis. Mandrel diameter shall be 10 x specimen thickness  $\pm$  10%. For tubular specimens the thickness is the outside diameter.

The specimens and mandrel shall be conditioned as specified in Table 1.

---

**3.8 Flammability**

The test method shall be as specified in ASTM D876.

The test shall be carried out on size 12.7/6.4

---

**3.9 Electric Strength**

The test method shall be as specified in IEC 243 (Short time test).

---

**3.10 Water Absorption**

The test method shall be as specified in Method 1 of ISO 62.

For sleeving of recovered bore greater than 8mm, three disc specimens of diameter  $25 \pm 1$ mm shall be cut from the sleeving. For sleeving of recovered bore less than or equal to 8mm, three tubular specimens 50mm long shall be cut from the sleeving.

---

**3.11 Fluid Resistance**

The test method shall be as specified in ISO 1817.

Five tensile test specimens prepared as in Clause 3.3. shall be completely immersed in each of the fluids for the times and temperatures specified in Table 1. The volume of the fluid shall not be less than 20 times that of the specimen. After immersion, lightly wipe the specimens and allow to air dry at  $23 \pm 2^\circ\text{C}$  for  $1\text{h} \pm 15\text{m}$ . The Tensile Strength and Ultimate Elongation of each specimen shall be tested according to Clause 3.3. The test shall be repeated on the remaining specified fluids.

**Subsequent amendments to, or revisions of, any of the above publications apply to this standard only when incorporated in it by updating or revision.**

**5. SAMPLING**

Tests shall be carried out on a sample taken at random from each batch of finished sleeving. A batch of sleeving is defined as that quantity of sleeving extruded at any one time. Testing frequency shall be Production Routine or Qualification. Production Routine tests consisting of Visual Examination, Dimensions and Longitudinal Change shall be carried out on every batch of sleeving. Qualification tests shall be carried out to the requirements of the Design Authority.

**6. PACKAGING**

Packaging shall be in accordance with good commercial practice. Each package shall bear an identification label showing material quantity, description, size, colour and batch number. Additional information shall be supplied as specified in the contract or order.

TABLE 1 Test Requirements

| Test                                                                     | Test Method       | Test Requirements                                                       |
