

OPERATING INSTRUCTIONS

Hall Effect Zero Speed Sensor F58AM25

GREEN LINE INDUSTRIAL SPEED SENSORS

Product ID						
	Type #	Product #	Drawing #			
	F58AM25	385Z-05770	115282 Rev.004			
		·				
General						
Function	The F58AM25 series Hall effect speed sensors are suitable, in conjunction with					
	ferrous pole wheel, for generating square wave signals proportional to rotary					
	speeds. They exhibit a static function, whereby pulse generation down to 0 Hz is					
	guaranteed. The sensor function is independent of rotational mounting angle.					
Technical data						
Supply voltage	825 VDC					
Current consumption	Max. 12 mA (withou	it load)				
Signal output	Square wave signal from NPN output transistor with internal 2.7 kOhm pull-up					
	resistor, DC-coupled to supply (negative pole = reference Voltage).					
	Sink current: ma	x. 25 mA				
	Output voltage:					
	U _{high} ~ supply					
	U _{low} < 0.5 V a	t I = 25 mA				
Frequency range	0 Hz15 kHz					
Housing		htening torque: max. 35 Nm				
Connection	Connector mates w	ith straight plug MS3106A-1	0SL-4S, 2 pins			
Protection	Sensor head: IP68					
	Cable outlet: IP67					
Insulation		onics galvanically separated				
Pole wheel		ed wheel of a ferrous materi	al (e.g. Steel 1.0036)			
	Optimal performance	ce with				
	Involute gear					
	Tooth width > 1	0 mm				
	Side offset < 0.2	2 mm				
	Eccentricity < 0.2					
Air gap between sensor and	Module 1.0 (DP	25.4): 0.30.5 mm				
pole wheel	Module 2.0 (DP	12.7): 0.31.5 mm				
Operating temperature	-40°+125℃

OPERATING INSTRUCTIONS

Further Information					
Safety	All mechanical installations must be carried out by an expert. General safety				
	requirements have to be met.				
Connection	Sensor wires are susceptible to radiated noise. Therefore, the following points				
	have to be considered when connecting a sensor:				
	The sensor wires must be laid as far as possible from large electrical machines.				
	They must not run parallel in the vicinity of power cables.				
	The maximum permissible cable length is dependent upon the sensor voltage,				
	the cable routing, along with cable capacitance and inductance. However, it is				
	advantageous to keep the distance between sensor and instrument as short as				
	possible. The sensor cable may be lengthened via a terminal box located in an				
	IP20 connection area in accordance with EN 60529.				
Installation	The sensor has to be aligned to the pole wheel according to the sensor drawing				
	independent of its rotational orientation. Deviations in positioning may affect the				
	performance and decrease the noise immunity of the sensor. During installation,				
	the smallest possible pole wheel to sensor gap should be set. The gap should				
	however be set to prevent the face of the sensor ever touching the pole wheel.				
	Within the air gap specified the amplitude of the output signal is not influenced				
	by the air gap.				
	A sensor should be mounted with the middle of the face side over the middle of				
	the pole wheel. Dependent upon the wheel width, a certain degree of axial				
	movement is permissible. However, the middle of the sensor must be at				
	minimum in a distance of 3 mm from the edge of the pole wheel under all				
	operating conditions.				
	A solid and vibration free mounting of the sensor is important. Eventual sensor				
	vibration relative to the pole wheel can induce additional output pulses.				
	The sensors are insensitive to oil, grease etc. and can be installed in arduous				
	conditions. Within the air gap specified the amplitude of the output signals is not				
Maintenance	influenced by the air gap. Product cannot be repaired.				
Transport	Product must be handled with care to prevent damage of the front face.				
Storage	Product must be stored in dry conditions. The storage temperature corresponds				
Olorage	to the operation temperature.				
Disposal	Product must be disposed of properly, it must not be disposed as domestic				
Disposal	waste.				
	wasic.

COMPANY PROFILE

JAQUET TECH NOLOGY GROUP offers the world's mostversatile and advanced range of solutions for the detection, measurement, diagnosis and management of rotational speed. Our industry and application specific exper tise ensures that you will achieve an optimum solution. Completely matched to your individual requirements, meeting key industrial standards and certifications, our products help boost the performance of your machinery while reducing cost of ownership.

TYPICAL INDUSTRIES SERVED

- Automotive and !ruck
- Diesel / Gas engines
- Hydraulics
- Railway
- Turbines
- Turbochargers
- Industria Imachinery

PRODUCTS- SPEED SENSORS

- Various technologies
- Standard, custom and OEM models
- For demanding applications, e.g. 300,000 rpm, temperature up to 320 0C / 600 °F, high vibration, shock to 200 g, etc.
- GreenUnespeed sensors for generat applications
- Exmodels for hazardous areas
- Polebandsand target wheels available where needed

PRODUCTS- SYSTEMS

- Multi-channeloverspeed protection systems
- 1-2 channelmeasurement, protection and controlmodules
- Engine diagnostic system s
- Redundantspeed measurement and indication

SPECIAL PROJECT EXAMPLES

- · An autornative linear movement sensor
- Integrated power and torque measurement for display and gearbox control
- Navalspec. turbine protection for nuclear submarines
- Speed measurement in turreted, tracked vehicles

QUALITY MANAGEMENT AND STANDARDS

- Quality management: TS 16949 and ISO 9001, ZELMATEX 1020, KWU
- Sensors:GL, KWU, TÜV, ATEX, EN 50155, NF F16-101102, ABS, EMC
- Systems: IEC 61508 SIL 2 and SIL 3, API670, GL, TÜV, KWU, EX
- Environmental: RoHS EU directive 2002195 EC

JAQUET- YOUR PARTNER

- Efficient and professional service- JAQUET TECHNOLOGY GROUP is headquartered in Basel, Switzerland and has subsidiaries in Beg ium, China, Germany, the Netherlands, United Kingdom and United States along with a worldwide distributor and enduser service network.
- Flexible production quantities; from 1 to millians per project
- Reduction of total costs by intelligent and cost-effective solutions
- · Fast turn araund time
